

## Dye Testing Ward 1, City of Brampton

### What are we doing?

Peel Region has retained Infrastructure Intelligence Services (I2S) to complete Dye Testing in your neighbourhood. The area to be tested is shown on the map.

### What is Dye Testing?

Dye Testing is used to determine where the water flows from roof downspouts and outdoor surface drains. This is performed by pumping environmentally friendly dyed water into downspouts and outdoor drains and documenting the location of where the dyed water is observed. Locations can include lawns, ditches, sewers and/or nearby waterways.

### Why?

These investigations will confirm if outdoor surface drains, or downspouts that carry rainwater from your roof are connected to the sewers in the road. This is important to determine where storm water on your property flows and to find locations that may allow storm water to enter the sanitary sewer system.

### When?

Testing is expected to begin on **March 17, 2025** and is expected to last one (1) week in the area outlined on the map.

### What do I need to do?

**Nothing**, you do NOT need to do anything. This notice is just to inform you that our contractor will be in your neighborhood. You do not need to be home for this testing as access to property is **external only**. Peel Region staff and its contractors will **NOT** ask to enter your house.

### I have a question, who should I talk to?

For general inquiries please contact Peel Region at 905-791-7800, ext. 4409 or at [PublicWorksCustServ@peelregion.ca](mailto:PublicWorksCustServ@peelregion.ca). Should you have any further questions please contact Michelle Skerlan at Peel Region at 437-488-1356 or [Michelle.Skerlan@peelregion.ca](mailto:Michelle.Skerlan@peelregion.ca).

Thank you,  
Public Works Department

## What to expect during Dye Testing

Bright coloured dyed water may be visible – the colours normally used are green, red and blue.

At your Home

In the Sewer

In Waterways

**Day of Testing:** A representative from Peel Region will knock on your door to inform you of testing. The representative will be wearing an identification name tag with the Peel Region logo, and Peel branded clothing. If you are not home at that time, they will proceed with testing. Testing is expected to last approximately 30 minutes.

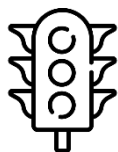

**Work Hours:** Work will take place from 8 a.m. to 5 p.m., Monday to Friday. No after hours or weekend work is expected.

**Testing Locations:** If you have received this notice, your property has been selected for testing. Testing is completely external on each downspout or surface drain, access to the backyard may be required.

**Dyed Water:** The dyed water will have a very bright fluorescent appearance to help the contractor identify the outlet. There is no need for concern if you see the dye on your property, in the street or in close by waterways. The Ministry of Environment, Conservation and Parks as well as the Toronto and Region Conservation Authority and Credit Valley Conservation Authority have been made aware of the dye testing. The dye is environmentally friendly and commonly used for river and groundwater assessments.

**Traffic Management:** Minor impacts to traffic may be required but no lane closures are expected. The contractor's testing vehicles will be parked on the side of the road during testing. Hoses from the vehicles will be used to complete the dye testing and access to your driveway will be maintained.
