

NOTICE OF STUDY COMPLETION

Improvements to Williams Parkway from Dixie Road to Torbram Road

The Study

The City of Brampton has completed a study for improvements to Williams Parkway from Dixie Road to Torbram Road (previously identified as Schedule A+ of MCEA). Technical studies were completed to determine what improvements and mitigations are needed for the Williams Parkway corridor, including evaluating capacity and active transportation needs, structural condition, potential safety, and operational issues towards achieving Vision Zero, population/employment growth, travel demand management, transit and traffic noise. The recommended improvements include road rehabilitation and lane width adjustments, a multi-use path on both sides of the road, streetlighting and signal upgrades, culvert upgrades where required, intersection design to improve safety, and noise attenuations.

A Project Report has been prepared to document the study process followed in developing the recommended solution, including the alternatives considered, the preferred design, impacts and mitigation measures, and consultation activities. The Project Report is available on the project website, which can be accessed through the following link or scanning the QR code on the right:
